

## WHAT WE OFFER

Intelligent Global Pooling Systems is revolutionizing the world's supply chain by providing manufacturers, suppliers and shippers of unitized loads with the world's first all-plastic pallet pool embedded with RFID tags.

Powerful advantages exist for virtually every industry — beverage, consumer electronics, grocery/ consumer packaged goods, home improvement/do it yourself, pharmaceutical, produce/meat and raw ingredients.

### *World's First RFID-tagged All-plastic Pallet Pool.*

#### ➤ The Superiority of Plastic

- iGPS offers a 48" x 40" plastic pallet able to hold 2,800 lbs (edge-rackable) that meets or exceeds the Grocery Manufacturing Association (GMA) pallet standards.
- iGPS pallets weigh less than 50 pounds and are approximately 30 percent lighter than their wood counterparts, making them easier to handle and creating tremendous potential savings in fuel and transportation costs. They are also 100 percent recyclable. Replacing all wooden pallets with plastic would remove billions of pounds of non-value freight from America's shipping and supply-chain infrastructure.
- iGPS plastic pallets are far superior to the best wood alternative in numerous ways, including uniformity of quality and performance, elimination of wooden shards, splinters and protruding nails, and immunity to infestation. Unlike wood pallets, which are highly susceptible to damage — putting shipped goods at risk — iGPS's plastic pallet is exceptionally durable.

#### ➤ The Power of RFID

- iGPS is the first large-scale pallet supply service to embed RFID (radio frequency identification) tags in every pallet to facilitate tracking shipments in real time, a feature of particular value for verifying food and drug safety and addressing various homeland security issues.
- iGPS features a world-class information technology and logistics system to facilitate pallet ordering, inventory management, concise and simplified invoicing, and efficient pallet return-reprocessing. This means that customers can easily work with our world-class service or even replace their existing reverse-logistics programs.

#### ➤ The Efficiency of Pooling

- With iGPS, businesses pay for only the pallets they use. Companies can rent the exact number of pallets they need and avoid the expense of owning and maintaining a pallet inventory.
- The greater durability and reduced maintenance costs over the lifespan of iGPS plastic pallets allows companies to rent our pallets at a cost fully competitive with pallets made of wood or other materials.
